

Case Study

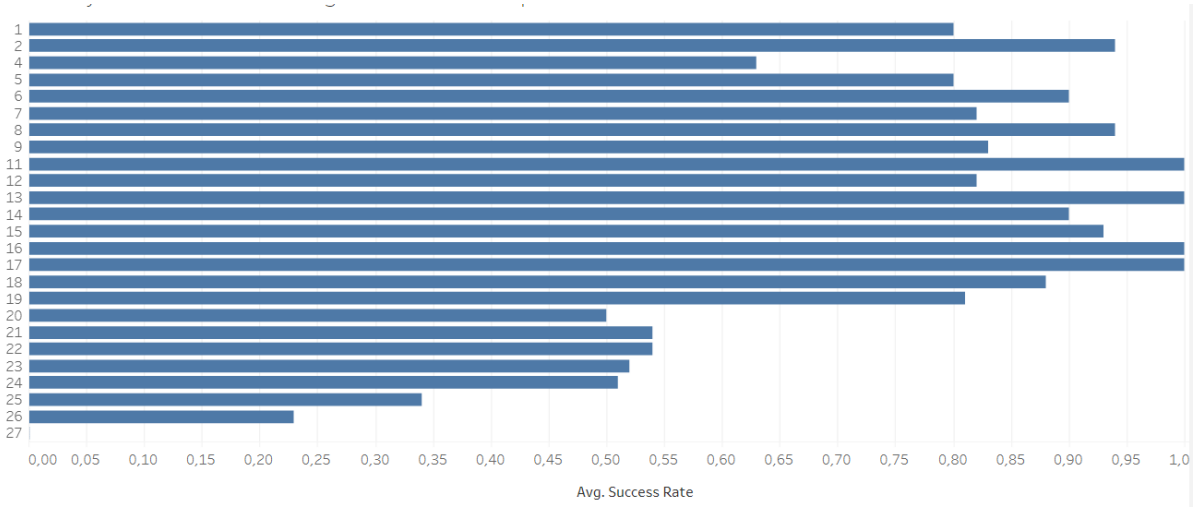

Kadir BERKTAŞ

Question: **In Denim category, from W24-25, our success rate has been very low. What is the reasons behind and what should we do about it?**

"First Note: I modified a part of the dataset, specifically the 'Listed Year Week' column, because I believe it makes the data more comprehensible. ('1' represents the first week of the year, '2' represents the second week, and so on.)

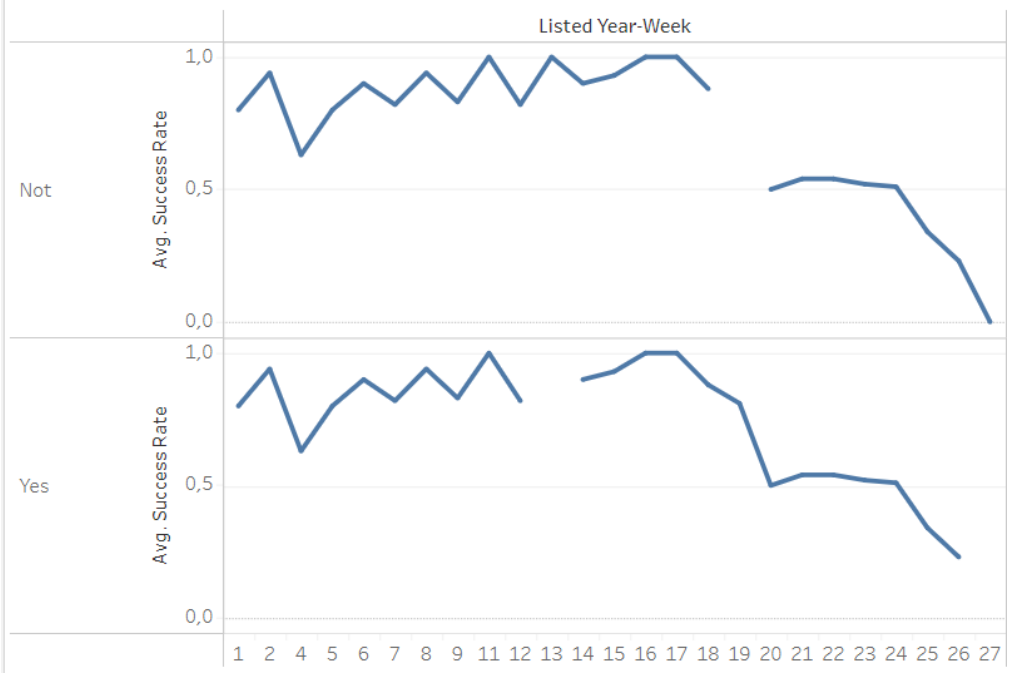

Second Note: I also added a new column called 'Success Style' for calculating success style.

Third Note: Lastly, I added another column named 'Success Rate' for calculating the success rate."

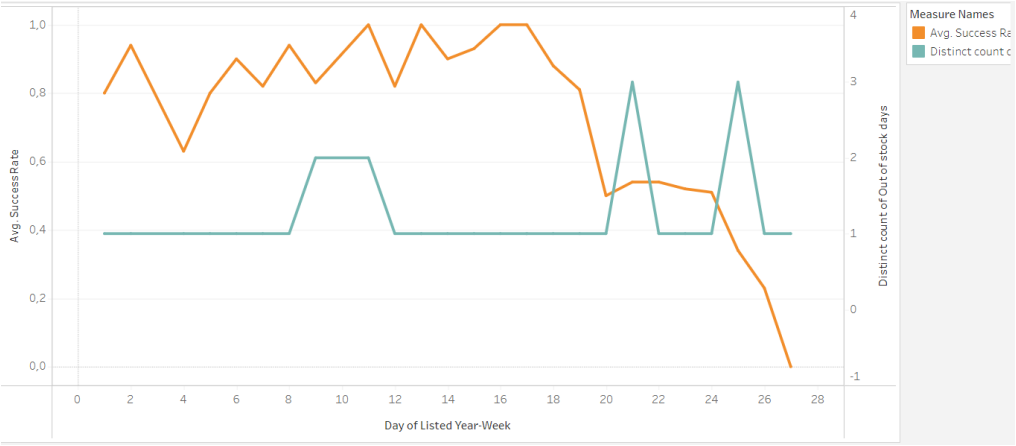

When I analyzed the success rate in Tableau, I easily noticed that the success rate was significantly low during weeks 24-25.

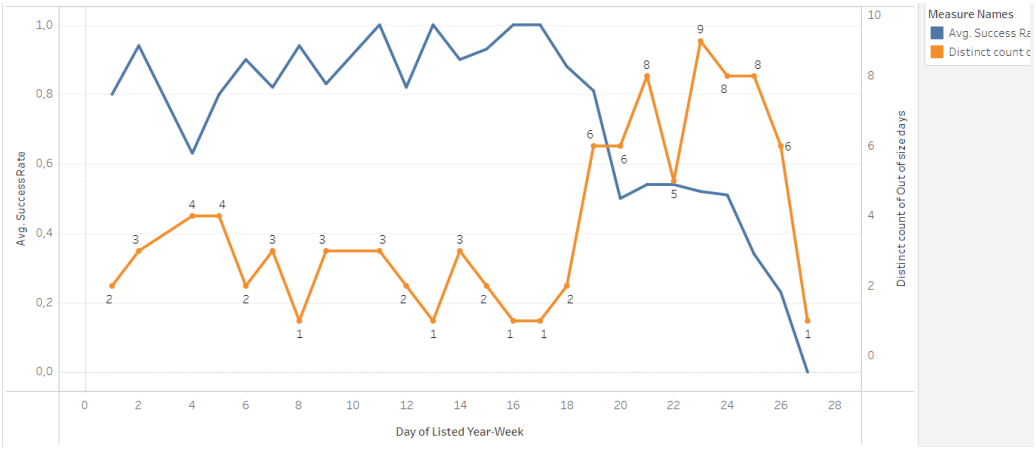

Next, I need to perform a **correlation analysis** to understand why the success rate was low during weeks 24-25. I will analyze some important variables in the dataset.

When I checked the graph, I can easily say that “Compound Color” is NOT related to “Success Rate”.

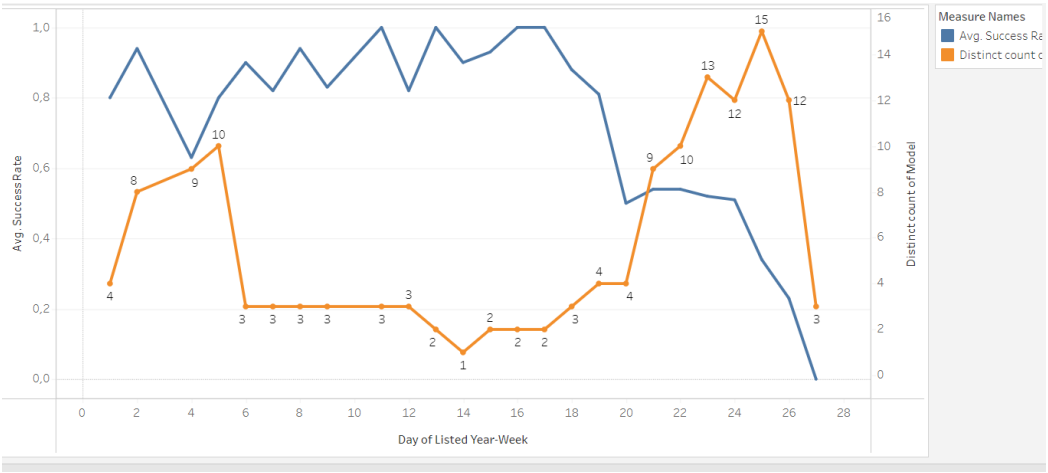

When I checked the graph, I can easily say that “Out of stock days” is NOT related to “Success Rate”.

When I checked the graph, I can easily say that “Out of Size Days” is **related** to “Success Rate.”

From the 18th to the 27th week, the success rate decreases rapidly, while at the same time, 'Out of Size Days' increases significantly. (26th and 27th are outlier variables)

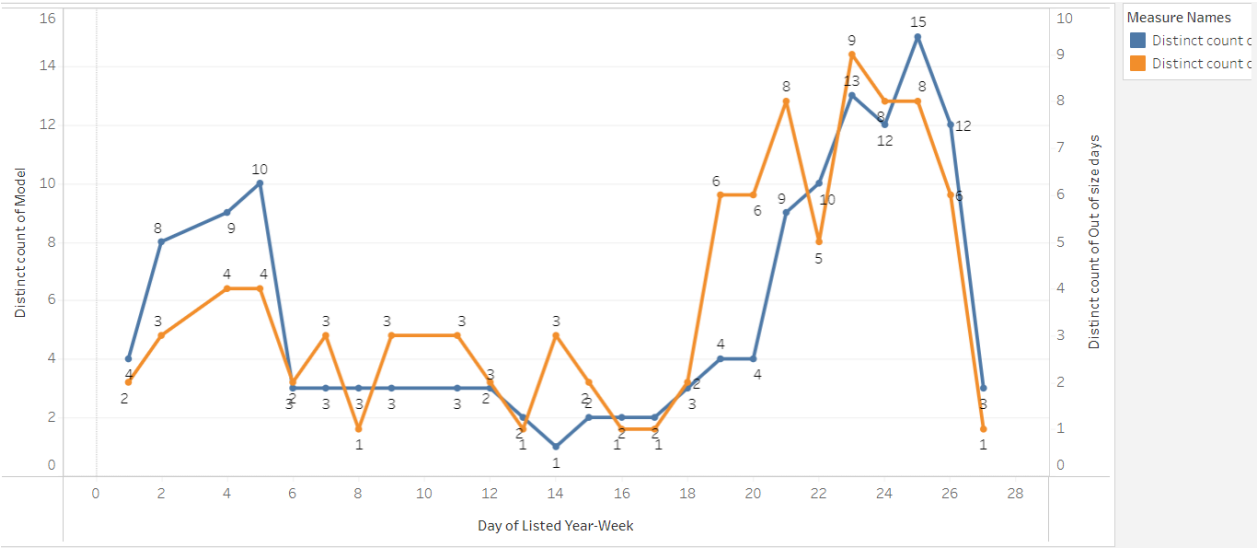

In weeks 24-25, “Out of Size Days” is “8”.

When I checked the graph, I can easily say that “Model” is **related** to “Success Rate.”

During the 24th to 25th weeks, models 12 and 15 are decreasing the success rate.

I found two related variables above. Now, I need to correlate them both.

When I checked the graph, I can easily say that “Model” and “Out of Size Days” are correlated with each other.

The results I found above are meaningful.

What Should Shein Do to Increase Its Success Rate?

Throughout my tests, I found two variables to be significant and impactful: “Model” and “Out of Size Days.” I will explain the reason for the decline between weeks 24 and 25 as follows:

Based on the dataset I have, SHEIN should offer a greater variety of sizes for products in models 12 and 15. They should keep more of the sizes in stock. Customers are leaving without making a purchase because they cannot find their size. SHEIN should respond to customer needs. I can say that this is the main reason for the decline in weeks 24 and 25.
